

Nihon Kohden Launches NK Network CareSM Service Program to Maximize Network Systems Supporting its Patient Monitoring and Neurology Equipment

All-Inclusive Solution Bundles Critical Platforms to Monitor, Maintain and Secure Networks

IRVINE, Calif. – June 21, 2021 – Nihon Kohden America, a U.S. market leader in precision medical products and services, today announced the launch of its NK Network CareSM Service Program, an all-inclusive solution that bundles critical maintenance and security systems together to help monitor, maintain and secure network systems using Nihon Kohden hardware and software.

“Our NK Network Care is a complete system that provides customers peace of mind in knowing they will have proactive remediation and support to mitigate security threats and maintain a safe environment for their patients,” said Scott Silcock, vice president of service excellence at Nihon Kohden. “Although maintaining and securing network systems is essential to ensure critical patient monitors are operating correctly, hospitals and health systems often need to patch together solutions from multiple companies, which can lead to difficulty when integrating with their equipment. NK Network Care is an all-in-one solution that can help detect issues before they happen.”

NK Network Care Service Program bundles three platforms to maximize hospital and health system networks, including a Network Management System (NMS), Security Information and Event Management (SIEM) and Network Threat Analysis (NTA). The comprehensive program offers benefits that go beyond what a singular third-party platform supplier can offer:

- *Maximum results:* Each system is fully integrated without impacting performance and functionality of Nihon Kohden monitoring equipment.
- *Complete solution:* Receive NTA, NMS and SIEM capabilities in one solution from top-tier companies with expertise in each area of focus.
- *Trusted security:* Maintain safe, secure environment with trusted software.
- *Real-time access:* Ensure up-to-date information on the status and security of Nihon Kohden hardware and software.
- *Faster resolutions:* Proactively identify and resolve issues before you are even aware of them with limited impact on resources.

All three platforms offered within the NK Network Care Service Program have already been tested and vetted to ensure they work harmoniously with Nihon Kohden equipment and customers will receive comprehensive care and troubleshooting support with the program add-on.
